NAMOGRAM EXTERNAL SOAP PARTNER INTEGRATION

Team ID: Team-6

Roll Numbers: 20251651039, 20251651048

1. Context & SOAP Edge Justification

Namogram integrates with an external Media Moderation & Transcoding Partner over SOAP. While the rest of Namogram uses REST JSON, SOAP is chosen for this partner edge to enforce a strict contract-first WSDL specification, message-level security tokens, and guaranteed ACID transactional processing for media content scanning.

2. HTTP Binding Block

POST /soap/moderation HTTP/1.1

Host: partner-gateway.namogram.com

Content-Type: text/xml; charset=utf-8

Content-Length: 482

SOAPAction: "http://partner.namogram.com/moderation/ProcessMediaContent"

3. Discovery (Modern Registry Entry)

Business Name: Namogram Safety Systems

Service Name: External Media Moderation Gateway

Endpoint URL: https://partner-gateway.namogram.com/soap/moderation

tModel WSDL Pointer: http://partner.namogram.com/moderation/partner.wsdl

4. Fault Mapping Note

When the external SOAP partner detects safety violations, it returns a SOAP ContentViolationFault. Namogram's internal Post Service catches this fault and maps it cleanly to a REST 422 Unprocessable Entity error (type: content-violation-detected) before returning a response to the user client. Internal SOAP stack details are never leaked to the client.
